### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on 06 October 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of Species II in the reply filed on October 6<sup>th</sup>, 2004 is acknowledged.

Claims 23-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 6<sup>th</sup>, 2004.

### ***Claim Rejections - 35 USC § 112***

Claim 22 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 22 is vague and indefinite. It is unclear as to how this claim further limits the structure of the tape guide. Note that the language in this claim is the same as that set forth in the independent claim.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 19, 20, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Smetana et al (U.S. Patent No. 4,390,119).

Art Unit: 3654

With respect to Claims 19, 20, and 22, Smetana et al, Figures 1-7, teaches a tape guide 5,6 comprising a hub 8 and spaced apart parallel flanges 9,10 having at least one texture comprising a cross hatched texture that includes an array of crossing scratches on the surface of the hub over which a tape 2 passes, the surface roughness exceeds a flying height of the tape.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smetana et al in view of Doninelli (U.S. Patent No. 5,409,174).

With respect to Claims 21-, Smetana et al are advanced above. Doninelli, Figures 1-8, teaches the surface roughness being between 1.0 microns and 3.0 microns. Note that the abstract mentions the surface roughness average between 20 and 40 micro-inches. 40 micro-inches is equivalent to 1.01 microns therefore it is within the desirable range. It would have been obvious to one of ordinary skill in the art to provide the guide of Smetana et al with a surface roughness in the range mentioned above and taught by Doninelli for the purpose of aiding in the tracking of the tape to form a proper pack on the hubs and provide an air bearing which eliminates a substantial amount of friction between the guides and the tape during transport.
